

# LA MUG

LEWISTON - AUBURN MACINTOSH USERS GROUP

# TIMES

VOL. 4 ISSUE 1

March 2, 1999

## Name that Newsletter

Get your thinking caps out...with the new design of the newsletter comes a new name. This is your chance! Everyone who submits a name(s) will be entered into a drawing for free membership for one year and a t-shirt. To enter: bring your ideas to the next meeting or e-mail the editor at [davnic@exploremaine.com](mailto:davnic@exploremaine.com). Entries are due by the next meeting - March 2. The winner of the drawing will be announced in next month's newsletter. Good luck!

## Meeting Tidbits

LA MUG's last meeting was well attended. Jeff Tveraas, with the use of a screen projector explained control panels and extensions and how to change extensions at startup (by holding down the space bar while booting up).

Skip Lalemand awed us with the powers of FreeHand 8.0. FreeHand is an "all in one" application which can be used to manipulate both type and images and to create layouts. Skip, a well seasoned user, touched upon many of the application's unique features.

This month Mike Baita will start the AppleWorks - SIG, don't forget to bring a floppy to save your work. Also, Jeff will share his experience of being a new strawberry iMac owner.

---

### Items for All:

1. Volunteers are needed for the NCEE Committee.  
Please contact Skip for more information.
2. Two LA MUG officer positions are still open. Secretary and Software Liaison. Also a secretary for the Oxford group would be very helpful so that more Oxford news can get into the newsletter.
3. IDG Expo Management Company announced last Tuesday that Macworld will be located in New York rather than Boston this year. For more information visit [www.macworldexpo.com](http://www.macworldexpo.com)

Lewiston, ME 04240

# FrameMaker 5.5

## Adobe Systems, Inc.

by Skip Lalemand

Well first off, I need to say, sorry it's taken so long to get this article done. It's not because this program is very hard to use, it's mostly because I've just been real busy. NCEE '99, LA MUG, family and DeSigns by Skip, if it's not one thing, it's another.

Ok, enough with the crying.

FrameMaker is, for those who don't know, a very powerful, flexible program which really is the only program to use when doing large documents such as, manuals, complex documents, proposals, catalogs, technical publications, and or on-line product information.

It's strength lays in it's ability to make life easier, even though the documents normally made with FrameMaker aren't easy to do. You'll likely find yourself making your documents even fancier because of how easy FrameMaker is to work with.

Now when I say easy, don't think this program is for everyone, because it's not. If you don't do any of the types of documents listed above then it's not for you. But if on the other hand you do, then you should be looking hard at FrameMaker. Below is just a small list of some of the best features FrameMaker has to offer.

Work smarter, not harder

FrameMaker's tools let you create documents quickly and easily.

Import text from your favorite applications\*

Work across UNIX, Windows and Macintosh platforms.

Create side heads, run text around graphics, and create column-straddling headlines

Easy to create great looking tables. Customize Tables, shade cells all easy with FrameMaker.

Quickly convert FrameMaker files into HTML ready files. Jazz up your web site

Create PDF files right from within FrameMaker.

\* This is real nice when it works. The one area I find fault in FrameMaker is it's, or my, inability to simply import, accept a PageMaker document. Now this won't be a problem if you create the document from scratch using FrameMaker, but if you go out and buy it, you'll likely want to take some of you current documents from PageMaker and put them into FrameMaker. This was something I wasn't able to do well. This also lead me to another rare problem with Adobe. I emailed and called Adobe for help with this issue and didn't receive a call or email back. This was strange but stuff happens.

The one feature that I liked to most, and there are many, is it's ability to update or reformat your entire document by changing a single master page. Let me try to explain this a little better.

Let's say your boss (can't blame yourself), comes over and say's that he/she needs to add another page to the document. This could be a little of a problem if the page is going to be in the middle somewhere, but not if your using FrameMaker. Just simple put the page in where you need it, and FrameMaker will AUTOMATICALLY change all of the page numbers to the right new number. Now it's this easy to up date the index as well. You type in what you need for the "New" page, and FrameMaker will shift all the others to the right place. No more having to change each page number, one at a time. No more having to change each entry, page number, in the index, FrameMaker updates this with one click.

Now all of these great features come at a price, but if you can cut the time you spend at the computer working by half, then cost isn't an issue. As far as your hard drive space, yeah you'll need a fair amount. A full install will take up about 75 Mb's and it likes to have about 35 Mb's of RAM allocated to the program. It can and will run on less, but as we all know, more is better.

Skip used a Mac 8600/300, 250+ MB's RAM with System 8.5

by Mike Baita

We wish to thank Ted Moreau for producing Ted's Tips over the last two years. Mike Baita is taking over this corner to start a new series of terms, tips and error codes.

**ADB port:** Apple Desktop Bus port. It is used to connect the primary Mac input devices, including the keyboard and the mouse.

**Alias:** A Desktop icon that looks like a file, but is actually a pointer to another file.

**Apple File Exchange:** A program that enables a SuperDrive to emulate a floppy drive for a DOS-base PC.

**AppleScript:** A system-level programming language that lets the user combine features from different applications and automate tedious procedures.

**AppleTalk:** Apple's proprietary networking system.

**Application Generator:** Software designed for creating special-purpose programs, commonly involving database programs.

**Applications:** Application software. The task that applications software helps you perform.

**ASCII:** The American Standard Code for Information Interchange. The most common system for translating bytes into alphanumeric characters.

**Assembly Language:** A programming language that used symbols to represent common strings of machine language code.

**Authoring Tool:** A type of fourth-generation programming language designed for non programmers. Authoring tools, such as HyperCard, are commonly used to create multimedia presentations and interactive programs.

---

**Here is a tip that will answer a question that was asked during a resent LA MUG meeting.**

**Q:** Where is the "Remember Password" window is Netscape?

**A:** 1. Open Netscape 2. Open Edit menu 3. Select Preferences 4. Select Mail Servers 5. Click once to hi-lite your pop incoming mail server 6. Click on Edit button bar 7. The Mail Server Info window opens and it is here that you select Remember Password.
